

Lab Tutorial: TACC Platform

Xinyang HUANG (xhuangci@connect.ust.hk)

COMP 4901Y

TACC Brief

- What is TACC[1]?
 - An efficient cluster management solution for machine learning applications in large-scale GPU clusters
- What is the TACC cluster?
 - A server cluster with hundreds of GPUs operated via TACC
- How users share the TACC cluster to run various machine learning tasks?
 - Users submit their job description via tcloud [2]
 - TACC compiles the job description and generate a running environment
 - TACC schedules worker nodes for job executing and return results.

TACC Brief

- What is TACC[1]?
 - An efficient cluster management solution for machine learning applications in large-scale GPU clusters

Task in this Lab: Complete HW2 Q3 via TACC

- How users share the TACC cluster to run various machine learning tasks?
 - Users submit their job description via tcloud [2]
 - TACC compiles the job description and generate a running environment
 - TACC schedules worker nodes for job executing and return results.

[2] <https://github.com/turingaicloud/quickstart>

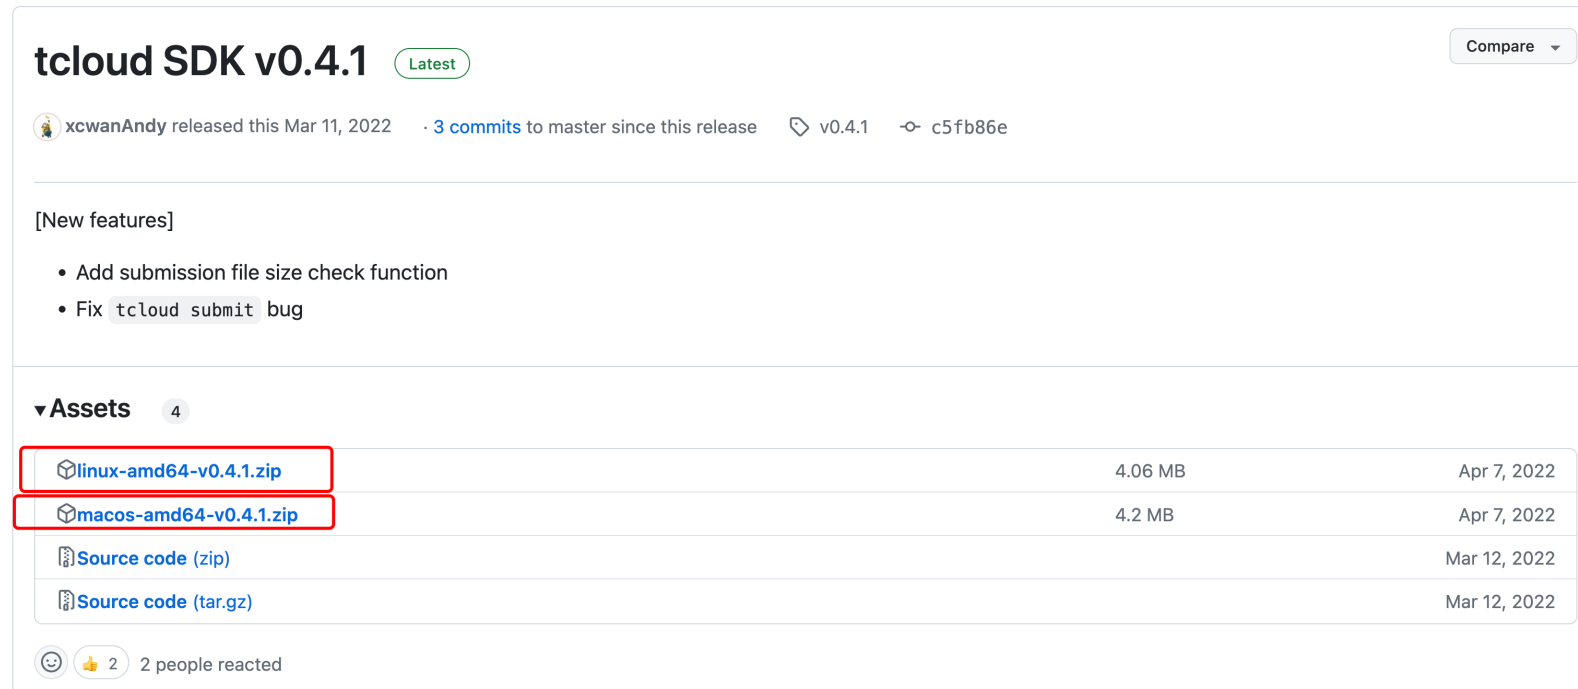

TACC Quick Start

- **Apply for access**
 - Link: <https://tacc.ust.hk/#hkust>
 - Click "Apply for access" and submit your application

TACC Quick Start

- **Prepare local running environment**

- **Step 1:** download *tcloud* to your own laptop/computer
 - Download *tcloud* from [github page](#)
 - Currently, *tcloud* only supports MacOS and Linux OS. If your OS is Windows, please try to install a virtual environment for Ubuntu.

tcloud SDK v0.4.1 Latest Compare

xcwanAndy released this Mar 11, 2022 · 3 commits to master since this release v0.4.1 c5fb86e

[New features]

- Add submission file size check function
- Fix tcloud submit bug

TACC Quick Start

- **Prepare local running environment**

- **Step 2:** Decompress and setup tcloud environment

- cd to the path of *tcloud*, and run the setup.sh
 - The setup.sh will output an environmental path, which looks like: "export PATH=/.....". Copy this command to the terminal and run.

```
minel@MineldeMacBook-Pro-4 macos-amd64-v0.4.1 % pwd
/Users/minel/Git/quickstart/macos-amd64-v0.4.1
minel@MineldeMacBook-Pro-4 macos-amd64-v0.4.1 % ls
setup.sh      tcloud
minel@MineldeMacBook-Pro-4 macos-amd64-v0.4.1 % bash setup.sh
Remember to execute the following command:
export PATH=/Users/minel/Git/quickstart/macos-amd64-v0.4.1:/opt/homebrew/bin:/opt/homebrew/sbin:/usr/local/bin:/System/Cryptexes/App/usr/bin:/usr/bin:/bin:/usr/sbin:/sbin:/Library/TeX/texbin
minel@MineldeMacBook-Pro-4 macos-amd64-v0.4.1 % export PATH=/Users/minel/Git/quickstart/macos-amd64-v0.4.1:/opt/homebrew/bin:/opt/homebrew/sbin:/usr/local/bin:/System/Cryptexes/App/usr/bin:/usr/bin:/bin:/usr/sbin:/sbin:/Library/TeX/texbin
minel@MineldeMacBook-Pro-4 macos-amd64-v0.4.1 %
```

TACC Quick Start

- **Prepare local running environment**
 - **Step 2:** Decompress and setup tcloud environment
 - If successful, run the "tcloud" at your terminal, then it will output:

```
minel@MineldeMBP-4 macos-amd64-v0.4.1 % tcloud
TACC Command-line Interface 0.4.1

Usage:
  tcloud [command]

Available Commands:
  add          Add dependency to tuxiv.conf file
  cancel       Cancel job
  cat          Concatenate FILE(s) to standard output.
  config       Configure user's account in tcloud CLI
  download     Download file from TACC
  env          Check environment
```

TACC Quick Start

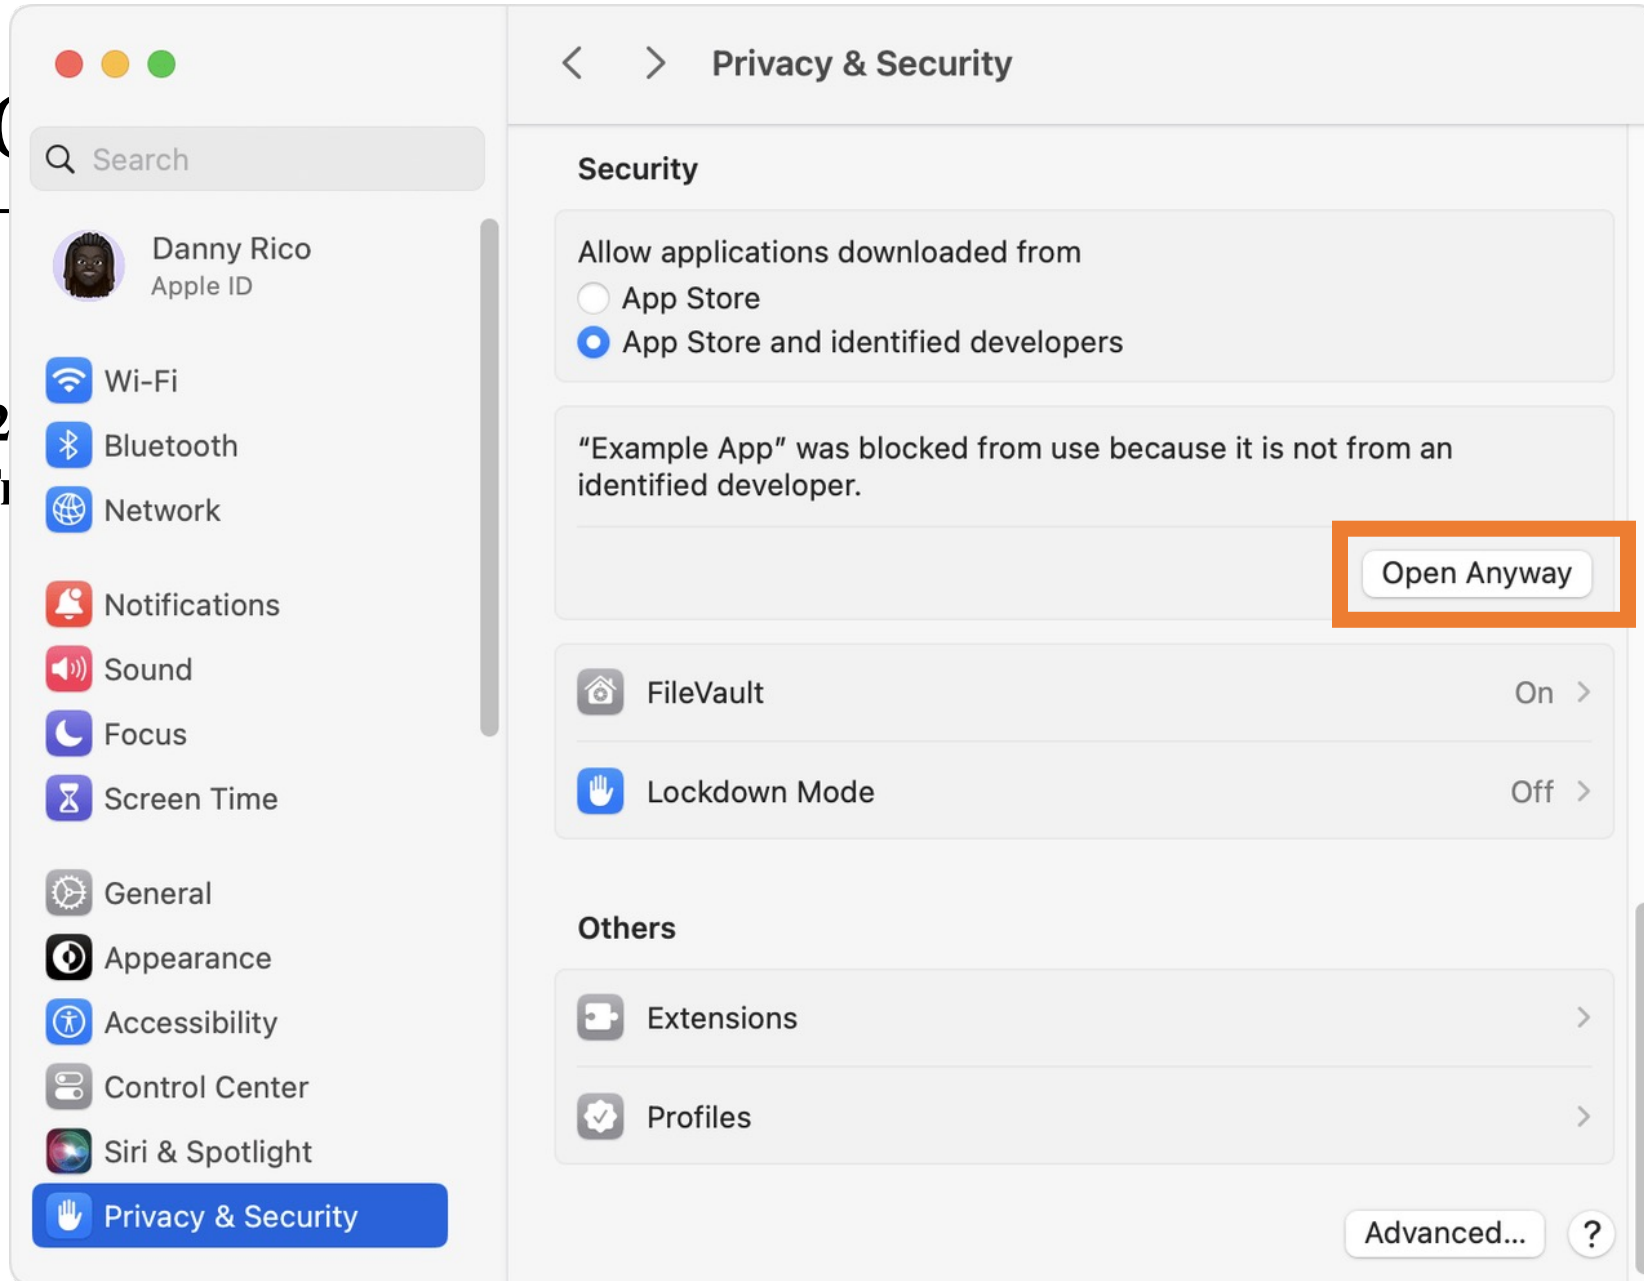

- **Prepare local running environment**
 - **Step 2:** Decompress and setup tcloud environment
 - **Troublesome**
 - For MacOS users, the OS may warn that "The developer cannot be verified.....". To solve it:
 - Open the "Privacy & Security" in the system configuration
 - Find "tcloud was blocked from use...", click open anyway

TACC C

- **Prepare**

- Step 2

- T

TACC Quick Start

- **Prepare local running environment**

- **Step 3: *tcloud* initialization**

- First, you need to configure your TACC credentials. You can do this by running the *tcloud* config command:
 - `$ tcloud config [-u/--username] MYUSERNAME`
 - `$ tcloud config [-f/--file] MYPRIVATEFILEPATH`
 - Then, run *tcloud* init to obtain the latest cluster hardware information from TACC cluster.

Bash ▾

自动换行 | 复制

```
1 PARTITION AVAIL  TIMELIMIT  NODES  STATE NODELIST
2 tacc*      up      infinite    5    alloc 10-0-7-[18-19],10-0-8-[18-19]
3 tacc*      up      infinite   19    idle 10-0-2-[18-19],10-0-3-[10-13]
```

- If you get a similar output above, congratulations on having completed all the initialization processes

Submit Your First Job

- **Download sample codes and job description**

- A python program that you want to execute
- A configuration file for describing your job
 - Do not change any entries in tuxiv.conf for your first submission!

- **Submit your job via tcloud**

- cd to the “DDP” folder, and run **tcloud submit**
- The tcloud will generate a transaction to the TACC cluster

```
minel@MineldeMacBook-Pro-4 DDP % ls
resnet18_mnist_ddp.py  tuxiv.conf
minel@MineldeMacBook-Pro-4 DDP % tcloud submit
Start parsing tuxiv.conf...
building file list ...
8 files to consider
DDP/
DDP/run.sh
```

Submit Your First Job

- **Example outputs for your first submission**
 - For the first time, TACC needs to generate your running environment
 - The step may need around **15 minutes**, just for the first time

```
minel@MineldeMacBook-Pro-4 DDP % tcloud submit
Start parsing tuxiv.conf...
building file list ...
8 files to consider
DDP/
DDP/run.sh
    236 100%    0.00kB/s    0:00:00 (xfer#1, to-check=5/8)
DDP/configurations/
DDP/configurations/citynet.sh
    0 100%    0.00kB/s    0:00:00 (xfer#2, to-check=2/8)
DDP/configurations/conda.yaml
    169 100% 165.04kB/s    0:00:00 (xfer#3, to-check=1/8)
DDP/configurations/run.slurm
    309 100% 301.76kB/s    0:00:00 (xfer#4, to-check=0/8)
```

```

Submit Your First Job

- **Example outputs for your first submission**
 - Next, tcloud will return a **Job ID** for the submission
 - Run `tcloud ps` to check the job status

```
done
#
# To activate this environment, use
#
#   $ conda activate comp4901y-hw2
#
# To deactivate an active environment, use
#
#   $ conda deactivate

Env comp4901y-hw2 exists, dependencies updated.
Submitted batch job 22894
Job DDP submitted.
minelde@MineldeMacBook-Pro-4 DDP %
```

```
Minelde@MineldeMacBook-Pro-4 DDP % tcloud ps

22894 tacc run.slur xinyang R 0:19 1 10-0-1-18
```

Submit Your First Job

- **Get outputs for your submission**
 - Run `tcloud cat slurm_log/slurm-<Your Job ID>.out`

```
minel@MineldeMacBook-Pro-4 DDP % tcloud cat slurm_log/slurm-22894.out
Train Epoch: 1 [0/60000 (0%)]    Loss: 2.487836
Train Epoch: 1 [2560/60000 (17%)]    Loss: 0.724260
Train Epoch: 1 [5120/60000 (34%)]    Loss: 0.467392
Train Epoch: 1 [7680/60000 (51%)]    Loss: 0.350130
Train Epoch: 1 [10240/60000 (68%)]    Loss: 0.188361
Train Epoch: 1 [12800/60000 (85%)]    Loss: 0.136022

Test set: Average loss: 0.0002, Accuracy: 2381/2500.0 (95%)

Train Epoch: 2 [0/60000 (0%)]    Loss: 0.147818
Train Epoch: 2 [2560/60000 (17%)]    Loss: 0.109058
Train Epoch: 2 [5120/60000 (34%)]    Loss: 0.168625
Train Epoch: 2 [7680/60000 (51%)]    Loss: 0.131864
Train Epoch: 2 [10240/60000 (68%)]    Loss: 0.073659
Train Epoch: 2 [12800/60000 (85%)]    Loss: 0.060909

Test set: Average loss: 0.0001, Accuracy: 2417/2500.0 (97%)

Train Epoch: 3 [0/60000 (0%)]    Loss: 0.094916
```

- Run `tcloud ls slurm_log` if you forget your job id

Submit DDP & FSDP codes for HW Q3

- Check the CUDA elapsed time to record the training duration

```
Test set: Average loss: 0.0001, Accuracy: 2441/2500.0 (98%)
```

```
Train Epoch: 5 [0/60000 (0%)] Loss: 0.056641

```

```
minet@minetdeMacBook-Pro-4 DDP %
```

Submit DDP & FSDP codes for HW Q3

- **Change the tuxiv.conf for different parallelisms**
 - ntasks-per-node: the number of tasks for the job, each task will occupy one GPU

```
1 entrypoint:
2   - CUDA_VISIBLE_DEVICES="0,1,2,3" python ${TACC_WORKDIR}/resnet18_mnist_fsdp.py --datasetDir=/mnt/data/mnist --batch-size=256
3   --epoch=5
4 environment:
5   name: comp4901y-hw2
6   channels:
7     - pytorch
8     - nvidia
9   dependencies:
10    - python=3.11
11    - pytorch=2.1.1
12    - torchvision=0.16.1
13    - torchaudio=2.1.1
14    - cudatoolkit=11.8.0
15 job:
16   name: resnet18_mnist_fsdp
17   general:
18     - nodes=1
19     - ntasks-per-node=4
20     - cpus-per-task=1
21     - gres=gpu:4
```

Submit DDP & FSDP codes for HW Q3

- **Record the training duration for different parallelisms**
 - Reference duration for DDP
 - 67.7970, 47.3447, 36.9281, 30.4318
 - Reference duration for FSDP
 - 72.1242, 60.0969, 42.9850, 35.6776

Office Hour for Q&A: TBD

Room 3661, Academic Building
